Hiring Managers

Ref: PHP Developer

I am writing to apply for the above position. I read the descriptions of the job requirements and qualifications and I believe I would be of great help to the team.

It will be a great opportunity to learn, explore, expand, share, and to contribute. I believe strongly that I would be a great addition to the team because I have over 13 years of PHP web development.

Throughout my experience as a developer, I do not see programming as just a career or a job but an art form just like it would be for any artist. The work being done in the background is complicated, takes times and effort, a lot of focus to make sure all things are done properly and well for the result to be flawless. When I program, I don't just program, I create art.

Here is why I know I will be a good addition to the team. At my Anchorage, Alaska (Pegasus Aviation Services, LLC) job and for the last 13 years, 95% of our applications, modules, contents and websites are done in a very fast and super aggressive time crunch. They all needed by yesterday, which I had to adapt, learn how to do things fast, come up with better methods to achieving most efficient and best result. A few of the programs I am proud of are the Payroll System that track and calculate pays for all the employees, Messaging System so employees can communicate (internal email system), Training Portal that employees use for training every day, and last but not least, Ticketing System that allows employees to submit tickets for various reasons.

My last job here in Oklahoma City, OK (M-D Building Products, Inc.), here I build reports from Oracle database system for the company. They had over 100 reports that needed to be converted from a third party website to be put on the new Intranet so everyone in the company can access it. This conversion saved the company over \$70,000 a year and when you added up the efficiency and speed, and the time users saved by not having to wait for the report to be completed, the company would've saved upward of \$90,000.

Recently, I finished building a Cargo Flight Tracking System for a client in Australia. This program tracks their cargo flights from and to their operational station. You can view my code at <https://github.com/yangpaothao/www.git> to get a better idea of my code organization.

I know that by moving from one job to the next, there will always be learning curve no matter how small but I am ready to learn and to be part of your team if you would give me an opportunity.

Please contact me if you need any additional information from me. You can reach me at 405-889-0899 or yangthao@thaofamilies.com.

Career Focus:

Software programming, web programming, networking and database management skills and general information technology.

Education

Southwest Minnesota State University, Marshall MN

Bachelor of Science in Computer Science
